Senior Software Engineer

815-909-4037

EDUCATION

Senior Software Engineer

November 2022 - Present

Full Stack Developer

July 2021 - November 2022

Springfield, MO.

- Overhauled the inspection process using Microsoft's Graph API, thus eliminating the issue of incomplete transfers of inspection packets in an Agile environment.
- Converted nearly 500,000 records into new tables in order to trim and restructure inspection data.
- Used the Google Maps RESTful API to provide route information to inspectors.
- Troubleshoot technical issues for employees and smaller insurance agencies through chat or call.
- Communicated with third party vendors to discuss and diagnose issues or inquiries regarding API documentation and usage.
- Renovated the insurance portal's web pages using a third-party template and a CSS web framework to increase usability and responsive design.
- Communicated with other departments in collaborative meetings to discuss new feature updates and prospective projects.

PROJECTS

Simple Goals

May 2023 - November 2023

Tech: TypeScript, React.js, React Native, CSS, Figma and Inkscape

- Coded an android application that allows users to record and track the progress of their goals using the React Native mobile framework.
- Implemented offline data storage functionality of user information using AsyncStorage in serialized JSON.

Healthcare Transportation Web App

January 2021 - May 2021

Tech: Node.js, MongoDB, Express, Pug, CSS, JavaScript, JQuery, and Amazon Web Services

- Acted in the role of the Product Manager to develop a concept full stack web application that will provide rides for employees needing worker's compensation.
- Developed middleware functions that would communicate with our NoSQL database using Express.
